FACTS

330M people get surgery every year. Take the number of deaths in the world.

THEME FOR 2016: HAND HYGIENE SUPPORTS SAFE SURGICAL CARE

1 in 2 SURGICAL STAYS DO NOT WASH THEIR HANDS AT THE RIGHT MOMENT

INCIDENCE OF STEM INCREASES BY 5-20 DAYS IN 50% CASES

BRIDGING THE GAP BETWEEN IPC AND SURGICAL TEAMS TO REDUCE SURGICAL SITE AND ASSOCIATED INFECTIONS

ALL HEALTH CARE WORKERS WORKING WITH SURGICAL CLIENTS PRE AND POST OPER. MUST KNOW HOW TO DO HAND WASHING AND WHEN TO DO HAND WASHING. SINCE MOST CLIENTS GOING FOR SURGERY ALSO END UP WITH A URINARY CATHETER, IV LINES AND SOME WITH AN ENDOTRACHEAL TUBE, STAFF MUST KNOW HOW HAND WASHING SHOULD BE DONE WHEN DEALING WITH THESE DEVICES IN ORDER TO PREVENT THE SPREAD OF INFECTION!
