906

The NEPSY-II is the only single measure that allows the clinician to create a tailored assessment across six domains, specific to a child's situation in order to answer referral questions or diagnostic concerns. The results provide information relating to typical childhood disorders, which can lead to accurate diagnosis and intervention planning for success in school and at home.

The six domains are

- Social Perception (NEW)
- Executive Functioning/Attention
- Language
- Memory and Learning
- Sensorimotor Functioning
- Visuospatial Processing

Extended to Age 16

One of the most important improvements is its age extension - for ages 3 -16 years - to follow treatment and progress from the primary years to secondary school.

No longer do you have to use various subtests and tasks from many tools. With the integrated NEPSY-II you can:

- Assess executive functioning
- Vary the number and variety of subtests according to the needs of the child
- Link results to education difficulties
- Facilitate recommendations for mental health interventions
- Obtain a comprehensive view of quantitative and qualitative patterns of neuropsychological performance.

Most common usage is for

- Core assessment - provides a brief evaluation across all six domains
- Diagnostic assessment - in-depth assessment based on referral problems/questions or diagnostic concerns
- Selective assessment - selection of certain subtests based on clinical need
- Comprehensive assessment - comprehensive neuropsychological evaluation

Koppitz Developmental Scoring System for the Bender Gestalt Test— Second Edition (KOPPITZ-2)

Complete Koppitz-2 Kit: Examiner's Manual, 25 Examiner Record Forms Ages 5-7, 25 Examiner Record Forms Ages 8-85+, 25 Emotional Indicator Record Forms, and a Scoring Template, all in a sturdy storage box

The revision of Elizabeth Koppitz' Bender-Gestalt test scoring system is now available. One of the most frequently used psychological tests of the last century has been extensively revised and updated for today's applications to your practice.

The new *KOPPITZ-2* is ideal for use by psychologists, educational diagnosticians, licensed professional counselors, OTs, and others with proper training in the use of psychologically based tests of visual-motor integration. It is a highly reliable, valid measure of visual-motor integration skills that applies the developmental approach to scoring made so popular by its originator, Dr. Elizabeth

907 Munsterberg Koppitz. The new *KOPPITZ-2* is true to Koppitz' original conceptualization but has been redeveloped to meet current psychometric standards. The age range has been extended to allow the evaluation of special education students through age 21 and to assist in the evaluation of the visual-motor integration deficits of the growing population of seniors. For older children and adults, both 2 and 3 dimensional drawings are now required that reveal subtle deficits in visual-motor integration processes. The Bender-Gestalt Test has long been one of the most frequently administered of all psychological tests. The Koppitz scoring system, with long outdated norms from the 1960s remained popular for 40 years due to its contribution to clinical assessment of individual children. The original Koppitz scoring system was used in more than 500 published research studies on children with visual-motor integration problems, brain injury, learning problems, and various forms of emotional disturbance. This revision remains true to Dr. Koppitz' original views of the drawing of the Bender-Gestalt figures and the reduction in errors in the execution of these drawings as a true developmental phenomenon. The figures are derived from theories of Gestalt psychology.

The *KOPPITZ-2* requires the examinee to draw increasingly complex figures from a model (the Bender designs) on a plain sheet of white paper and to organize the task independently.

The *KOPPITZ-2* assesses the ability to relate visual stimuli accurately to motor responses and to organize the drawing task independently. It does so using a less structured task than other tests of visual-motor integration, thereby providing a more ecologically sound approach to assessment of visual-motor integration skills relative to highly structured drawing tasks.

Use the *KOPPITZ-2* to:

- determine the presence and degree of any extant visual-motor problems
- identify candidates for remedial programs and visual-motor training
- evaluate the effectiveness of intervention programs and monitoring recovery following acute injury
- monitor the progress of progressive degenerative disease processes that affect visual-motor integration skills
- gather research regarding the visual-motor integration process
- A special chapter of the Manual is devoted to the Koppitz Emotional Indicators (EIs) and their proper use. A specialized scoring form is provided just for this purpose to make scoring of the Koppitz EIs easy and objective but also to maintain them as a separate record from the Developmental Scoring System.

Raven's 2 Kit: Includes Scoring Template; 25 Answer Sheets; Test Booklet; Manual

The Raven's 2 provides a nonverbal measure of high-level observation skills, clear-thinking ability, and intellectual capacity that minimizes the impacts of

language and cultural differences. This test differentiates between people at the high end of intellectual ability with more difficult items and also offers a set of items applicable at any ability level, including the low end of intellectual ability.

The Raven's 2 can be used in a variety of settings, with culturally diverse populations, and/or with nonverbal children. The Raven's 2 can be administered fairly to virtually everyone, including those who are not language proficient or have communication-related disabilities. Scoring of the assessment provides both a standard score and a percentile rank based on norms collected from the general population.

Dear Dr Gumede

PSYCHOLOGICAL ASSESSMENT TOOLS TO BE INCLUDED IN THE PRIMARY HEALTH CARE EQUIPMENT CATALOGUE

Attached please find a minimum set of psychological assessment tools to be included in the departmental Primary Health Care Equipment Catalogue, as part of the requirements for Ideal Clinics.

The set of assessment tools was developed through extensive consultation with psychologists experienced in psychometrics from provincial health departments, private sector, academic institutions and the relevant professional and statutory bodies.

The criteria used for selection includes among others; ease of administration, affordability, availability and relevance to the local context, psychometric properties such as reliability, validity, sensitivity, specificity and comprehensive coverage of a range of psychological disorders.

Inclusion of this set in the Primary Health Care Equipment Catalogue will facilitate procurement of appropriate and valid psychological assessment tools in provinces, thereby improving the quality of the generated reports, some of which are used as expert evidence in Court.

Please contact Dr NE Mulutsi at Evah.Mulutsi@health.gov.za, tel 012 395 8044 should you require more detail on this matter.
