World AIDS Day is important because it reminds the public and government that HIV/AIDS has not gone away – there is still a vital need to raise money, increase awareness, fight prejudice and improve education about the disease. Therefore World AIDS Day is an opportunity to show solidarity with the millions of people living with HIV worldwide. However, the global statistics HIV & AIDS that was taken by UNAIDS shows that 1.7 million [1.4 million–2.3 million] people became newly infected with HIV (end 2018). During the day of the event candle lighting was done to serve as a community mobilization and to raise social consciousness about HIV and AIDS also to break down barriers of stigma and discrimination, and giving hope to new generations. Ndwedwe Municipality Mayor Mr N.V. Chili made a call to the community especially youth to unite and fight HIV /AIDS as it poses a threat to the growth of the country and the growth of the economy.
