

The PowerPoint presentation that follows forms part of the S.T.A.B.L.E course by Kris Carlson.

When you click on the presentation for the first time you will receive a warning that the file is not safe to open. The file **IS** safe and will not harm your computer. Please click on **More info**.

Clicking on **More info** takes you to this screen.

Click on **Run anyway**.

NB. It is safe to run these executable files. You should not receive the warning again.

We have been given permission to use this course free of charge in KZN. However, we are unable to edit the presentation in any way. Therefore, please take note of the points below

1. Complete the first 47 slides only. Stopping at: Heat gain by radiation
2. **Please note for slide 45:** in KZN we preferably attach the temperature probe on the left upper quadrant of the abdomen. This gives more of a skin temperature whereas when on the right side the probe lies over the liver and therefore reflects more of a core temperature. The probe may also be attached to the baby's back if necessary.
